⑤ Logging system: (Chain of Responsibility pattern):

Application usage: ① ATM, ② Vending Machines, ③ Logging s/m

→ Client will send Request & there with be Chain of Response handlers.

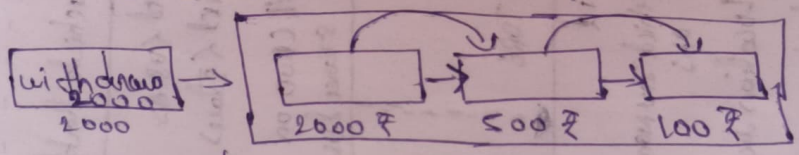

→ Anyone one handler will process Request. If it not Process it will go to next Response handler

Sender don't know, which Response handler will process the Request

---

→ ATM:

ATm machine.

① user try to withdraw 2000₹. There will be different handler
If ① 2000₹ handler Can't Process, → it goes to ② 500₹. If not → goes to ③ ₹100 handler.

② If none of them Process, we get out of money.

MAIN

```
LP lp = new Info(new Warn(new Error(null)));
lp.log(info_msg);
```

LogProcess (Abstract)

```
I = 1
W = 2
E = 3
LogProc next
LogProc(){
}
log(level, msg){
  if(next.log)
}
```

INFO

```
Info(LP){
  super(LP)
}
log(){
  if(→)
  do{
    super()
```

WARN

```
WARN(LP){
}
log(){
  ==
}
```

ERROR

```
Error(LP){
}
log(){
  ==
}
```
