(4) CAR-RENTAL SYSTEM? (keep it simple)

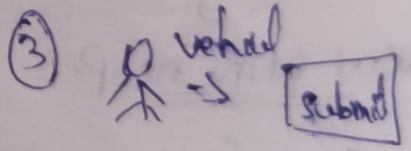

Software built to handle renting of automobiles for short period of time.

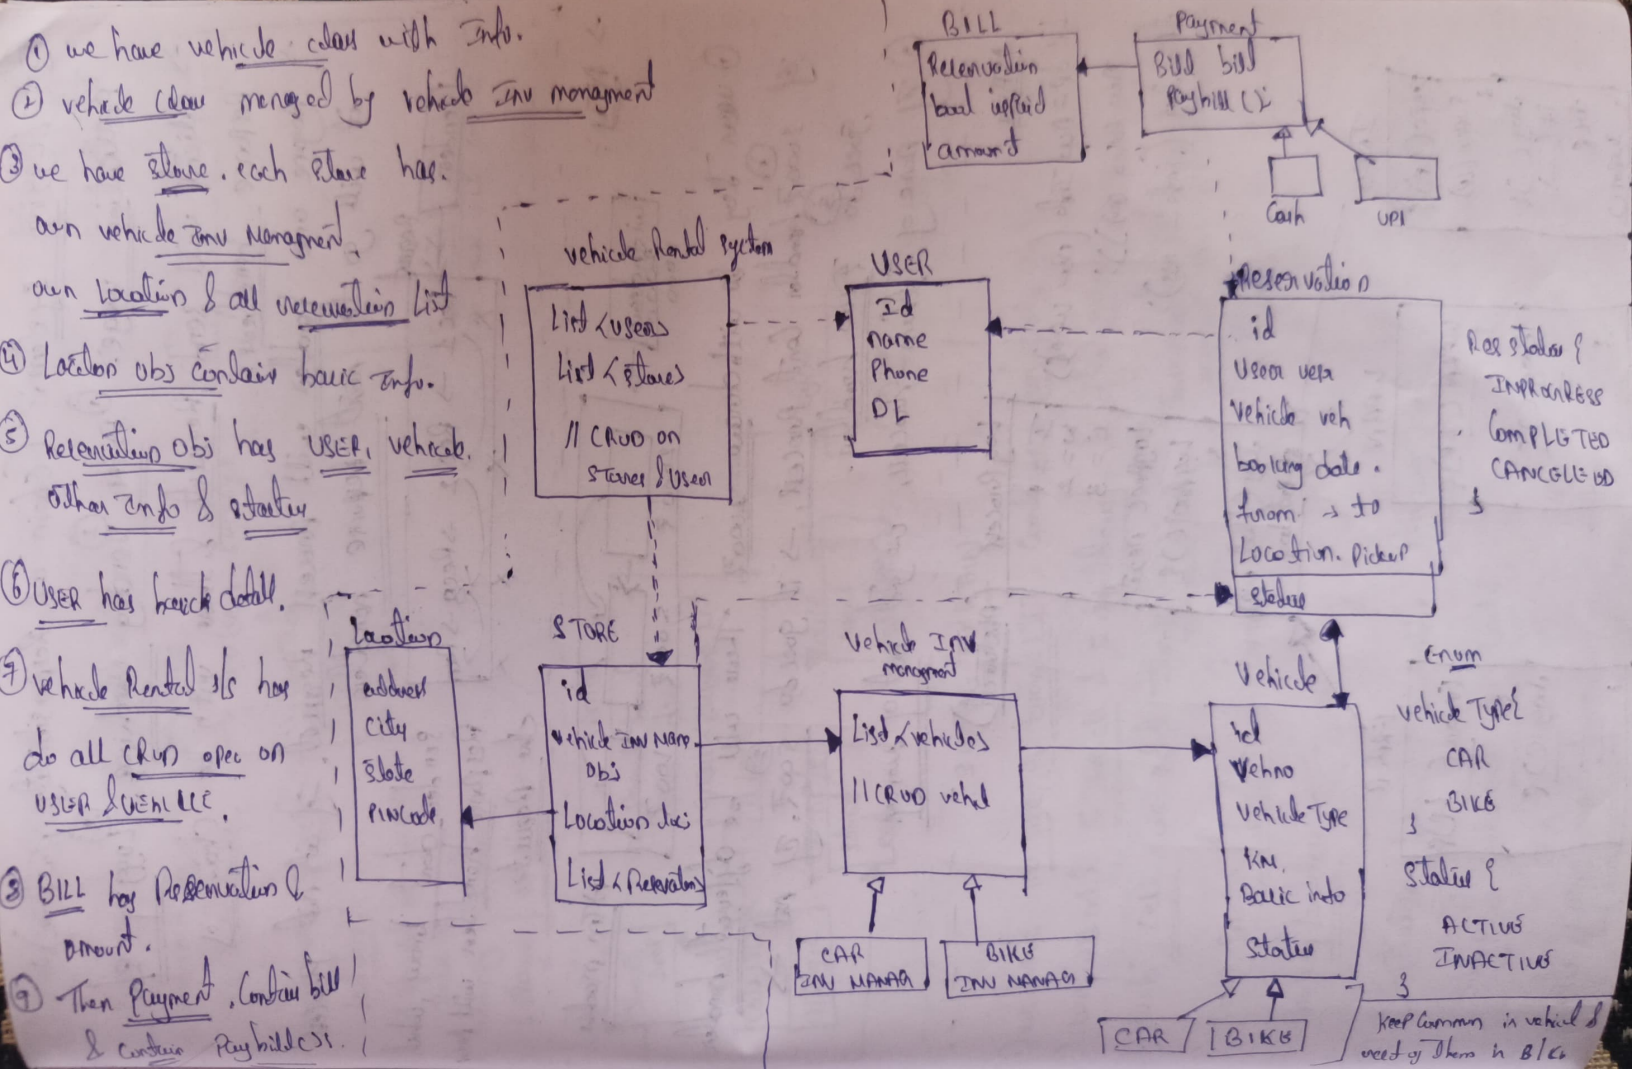

Rough flow

Requirement clarify	Objects
→ Make vehicle as scalable. vehicle (C, B, T)	→ USER → Location → Store → vehicles < Car, Bike } scalable → Reserve → Bill → Payment

1. we have vehicle class with info.
2. vehicle class managed by vehicle Inv managment
3. we have store. each store has.
own vehicle Inv Managment,
own Location & all reservation list
4. Location obj contain basic info.
5. Reservation obj has USER, vehicle.
other info & status
6. USER has bank detail.
7. vehicle Rental sys has
do all CRUD oper on
USER & VEHICLE.
8. BILL has Reservation &
Amount.
9. Then Payment, Contain bill
& contain Paybill()
