(14) SPLIT WISE APP:-

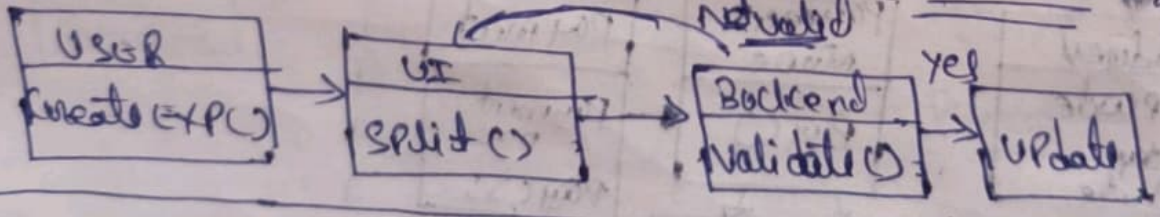

This is the App, where we can split the Expense among friends equally / unequally based on type.

IMPORTANT

(1) when user Create the expense, the client UI will split the expense among them & those data will come to Backend server

(2) In Backend we validate the split & return & update.

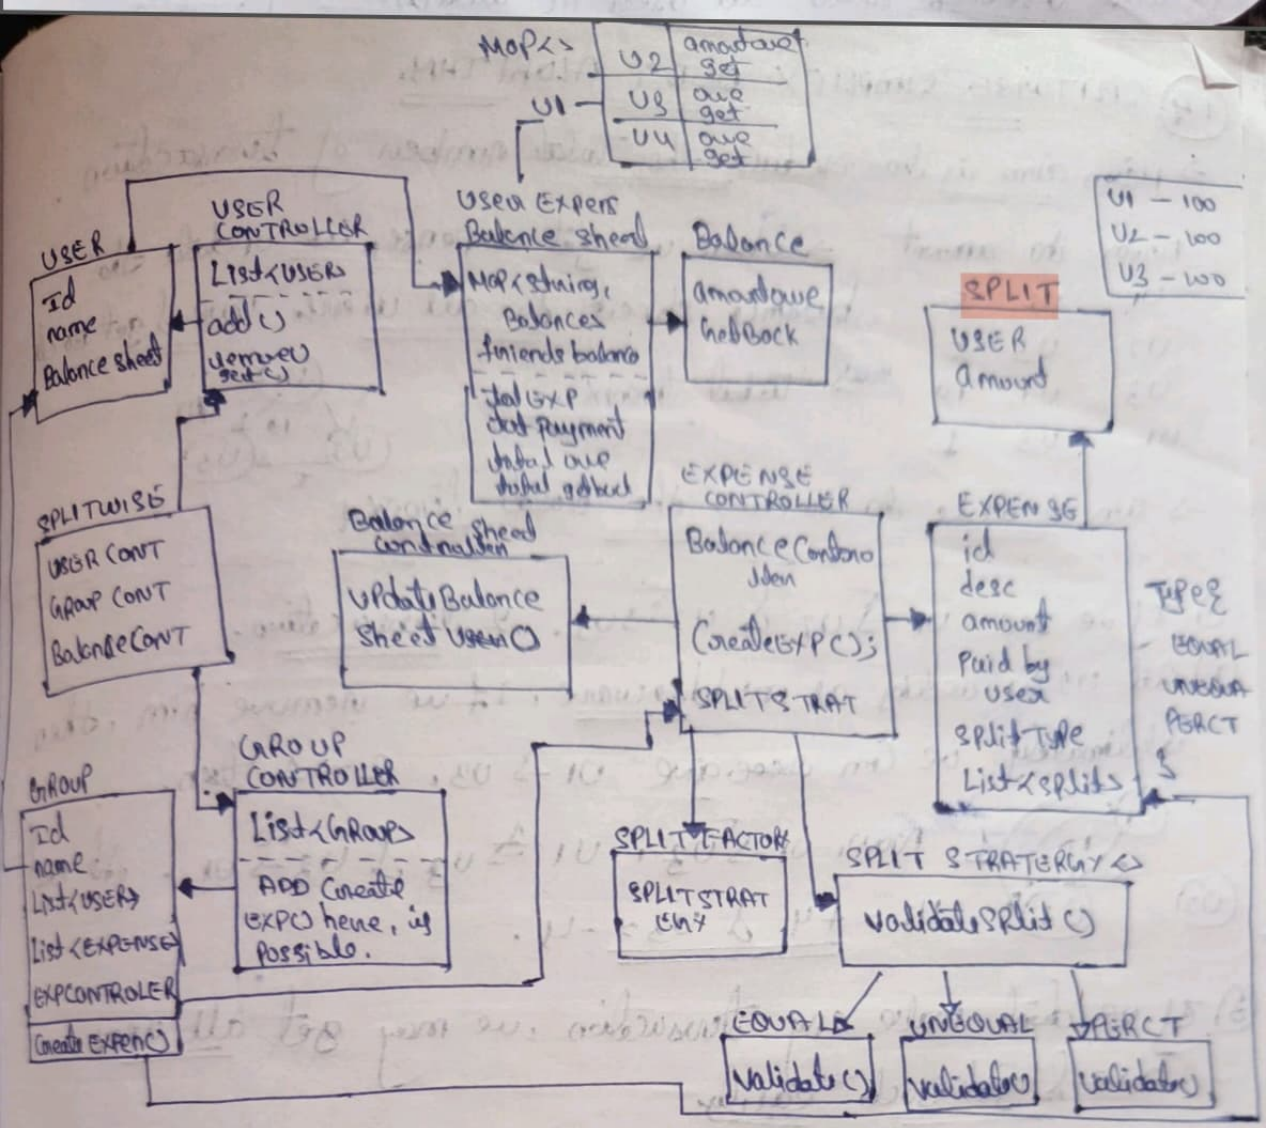

(1) Create USER's & GROUP. ADD USER's to Group

(2) Create SPLIT & expense. → it will Create EXP obj for us.

(3) Based on SPLIT type, get Strategy & validate it.

(4) once validate, update the Balance sheet based on right approach.

How Balance sheet updating

① Each user as BalanceExpense sheet. They can see their total expense, payments, owe & getback. And also they can see other friends Balance. How much they need to give & he need to give them.

② It is maintained using Map<String, Balance>. String = UId

EXPENSE 1

amount = 300. Paid = U1.

Split
- U1 100
- U2 100
- U3 100

U1

U2	0	100
	90	0
U3	0	100
	90	0

totalExp = 300
Payment = 100
owe = 0
getback = 200

U2

U1	0	100
	90	0
U3	0	100
	90	0

Exp = 100
Pay = 100
owe = 100
get = 0

① When we get Expense, we call updateBalance().

② Iterate over Map & get each USER & by 1.

③ For "Paid By USER". update total Exp, payment, owe, getback.

④ For remaining users owe & getBack
